ATTACHMENT 3

The manufacture of Dacron® polyester fibers began on March 23, 1953. Solid waste was landfilled until 1971 at which time a solid waste incinerator was installed. Liquid waste was placed in disposal pits until May, 1980. The landfill area and the disposal pits have since been backfilled, landscaped and seeded with a grass cover crop. The waste generated was from the Manufacturing, Auxiliary, Lab and Construction operations. The site has 5 potable deep wells within its boundary. The top screens of these wells range from 245 to 270 feet below the surface. Chemical analyses of the water from these wells show that it is well within the U. S. Public Drinking Water Standards. Four private potable wells are located ~1/4 mile NW of the site boundary (slightly over one mile from the nearest closed out disposal pit).

The direction to this site required in Item 1 is shown in Attachment 1.
